TO WHOM IT MAY CONCERN – THE OFFERING OF SYNERGY

I was recently approached by the directors of Synergy, Marco Rosa and Kevin Gambarana, to get a sense of a concept they've been developing over an extended period of time for use in the Financial Services industry. I am a Certified Financial Planner with the FPI, I have a Master's Degree in Tax Law, and I am a licensed Financial Services Provider. My office is in Constantia, Cape Town.

I have frequently been approached to view or make comment on various concepts devised or in the process of being devised to facilitate the work of the IFA, but none has caught my attention and interest as much as Synergy's offering. Synergy's offering of a mobile notebook computer with digitizing tablet technology from which all processes of our work, from new applications to compliance required in terms of FAIS, could be accurately and efficiently captured, signed and transmitted to any or all Financial Product Providers, with copies directly to clients, would essentially revolutionise my office. So taken was I with Synergy's offering that I approached people at Allan Gray, currently my preferred product provider and to whom Synergy presented their concept late 2006, to look to piloting a project with a handful of IFAs. Allan Gray assure me they have by no means shelved the concept and will be turning their attention to it more fully in the very near future. I feel certain that ultimately this is where the industry will move for Financial Advisers in the environment in which we now work.

There is no doubt in my mind that in very little time Synergy's concept will be mainstream in the Financial Services Industry. I anxiously await a Product Provider / Distribution unit to recognise the concept for the great strides in our professional practices it will offer, and turn their attention to incorporating it, with all the technology and infrastructure it requires, into a communication hub for the hundreds of processes which we complete on a daily basis. I would be very willing to participate in any pilot project incorporating Synergy's product.

I look forward to hearing more.

Yours sincerely

TO WHOM IT MAY CONCERN

RE: SYNERGY DIGITAL WORKFLOW – FINANCIAL SERVICES INDUSTRY

Following a recent demonstration by Marco Rosa and Kevin Gambarana of Synergy, we were certainly most impressed by the obvious benefits that their subject prototype system potentially has to offer, not only for substantial improvements to the Financial Services Industry broker distribution network, but also for greatly enhanced efficiencies within the industry as a whole.

We therefore strongly support this most enterprising initiative and would like to be kept apprised of any developments concerning the possible future implementation of such an administration system.

Yours faithfully

Re. Synergy Digital Workflow

To whom it may concern

Marco Rosa and Kevin Gambarana of Synergy Digital Workflow recently visited me to demonstrate their system in order to obtain my opinion as to whether or not I felt it was something that could prove to be useful within my business environment. When they started with their presentation I immediately saw the benefits of their system and how it could benefit me in my environment. It seems to me that this is a system that has far reaching implications for improving the inefficiencies within the distribution of financial services products, both for agents and for the Financial Services companies themselves. In short, if this was a technology that was already available, I would definitely want to be a part of it and integrate it into my current business processes.

Yours sincerely,

Stanley Tordiffe
